

D487 HIPAA Scenario

Your software company has just completed a medical database program for a hospital chain. The CSO of the hospital chain remains concerned that the program will be secure in protecting the Personally Identifiable Information (PII) of patients in accordance with HIPAA. How will you test the program to ensure that privacy requirements are being met? Identify, based on material in the course, five tests that you can conduct to determine that adequate safeguards are in place to prevent unauthorized information disclosure or the accidental leakage of PII data. Be specific in your answers.
